100 circuitos de shields para arduino (Banco de Circuitos) (Portuguese Edition) Newton C. Braga

Para esta edição escolhemos mais uma remessa com 100 circuitos que podem ser usados para interfacear com microcontroladores tendo como ponto de partida o Arduino. No entanto, eles também são compatíveis com outros microcontroladores como PICs, MSP430. E muitos outros, em alguns casos exigindo apenas modificações ou alterações de valores de componentes. Estes circuitos, denominados Shields, podem ser tanto usados para transferir os sinais de um microcontrolador a um circuito externo, como podem ser os próprios circuitos externos usados pelo microcontroladores. Eles também podem ser usados para transferir sinais de sensores e outras fontes para os microcontroladores. Todos eles usam componentes comuns.
