School Consultation: Conceptual and Empirical Bases of Practice (Issues in Clinical Child Psychology)

William P. Erchul, Brian K. Martens

Consultation is an indirect model of delivering psychological services. Within this model, a consultant and caregiver (consultee) work together to optimize the functioning of a client in the caregiver's setting and to increase the caregiver's capacity to deal with similar situations in the future. In schools, for example, a psychologist may consult with a teacher about a student in the teacher's classroom. The practice of school consultation has burgeoned since its formal introduction into public education during the 1960s. Today, graduate training programs in various specialties of psychology and education require coursework in consultation, and many professionals in these areas spend some portion of their day engaged in consultation. Consultation can be a powerful tool in delivering psychological services in schools, but only when the consultant possesses a requisite level of skill and sophistication. In preparing this volume, we envisioned its major purpose as reducing the level of naivete typically experienced by the beginning school consultant. Toward that end, we offer a systematic approach to school consultation that targets much of the information needed for one to consult in a competent manner. The reader should note that our use of the somewhat ambiguous term school consultant is intentional and recognizes that consultants working in schools today represent a variety of professional disciplines. The primary intended audience for this book, however, is clinical child psychologists and school psychologists, although psychologists having other specialties are likely to find its content useful.
