This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1885 Excerpt: ...principles as those followed in ovariectomy. The patient should be isolated, and perfect quiet maintained. A nurse should be in constant attendance. The circulation should be stimulated by the application of warmth to the surface of the body, especially to the extremities. Pain should be subdued by opiate suppositories or subcutaneous injections of morphia. In vomiting, following the operation, only ice, or a teaspoonful of ice-water at intervals, should be allowed by the mouth. Until the stomach becomes quiet, nutrition should be maintained by rectal alimentation. The diet during the first week should consist of milk, beef-tea, and other fluid forms of food. The catheter should be passed every six hours, until the patient is able to void her water voluntarily without straining. The bowels should be kept confined for at least the first five days. Only in very exceptional cases should lactation be permitted. During the first three to four days, where antiseptics have been used, it is not necessary to disturb the dressings. The superficial sutures may be removed on the fifth day, the deep sutures should be gradually removed between the seventh and tenth days. Peritonitis, septicaemia, and shock are to be treated according to the usual rules. Prognosis,--We have already alluded to the formidable character of the Caesarean operation. Michaelis collected 258 authentic cases, of which 54 per cent, ended in recovery. Kayser J added 80 new cases to those reported by Michaelis, and reduced the recoveries to 38 per cent. Mayer gathered 1,605 cases, with 54 per cent, recoveries. Pihan-Dufeilhay collected 88 cases, published between 1845-'49, of which 57 per cent, ended in recovery. Finally, Dr. Harris has gathered with great industry the histories of 134 cases performed...
