The Lancet: Stillbirths - Global Health Series The Lancet

Around 2.6 million stillbirths (the death of a baby at 28 weeks' gestation or more) occur each year. Although 98% of these deaths take place in low-income and middle-income countries, stillbirths also continue to affect wealthier nations, with around 1 in every 300 babies stillborn in high-income countries. This book highlights the rates and causes of stillbirth globally, explores cost-effective interventions to prevent stillbirths (as well as maternal and neonatal deaths), and sets key actions to halve stillbirth rates by 2020. Also included are Comments from professional organisations and parent groups, the latter demonstrating the unique tragedy for families of the birth of a baby bearing no signs of life. This research was launched in London, New York, Hobart, Geneva, New Delhi, Florence, and Cape Town on April 14, 2011.

The Lancet Global Health Series are groups of articles on a topic of global health importance. Series papers and Comments, related articles, links to relevant publications, media highlights, and audio interviews are available from <http://www.thelancet.com/global-health-series>. Research into prevalent conditions and wider health policy issues are reported by a range of experts.
